2018 CCSSE KEY FINDINGS

Students were asked to indicate how often they engaged in several educational activities during the current school year (2017-18). OCC's five highest and five lowest scored items (relative to the 2018 CCSSE National Cohort) are represented. For the highest items, only the scores for the frequency of students' use of career counseling were statistically higher than CCSSE National Cohort scores. However, all lowest scored items, with the exception of one (frequency of students' use of skill labs) were statistically lower than the CCSSE National Cohort.

Aspects of HIGHEST OCC Student Engagement

Aspects of LOWEST OCC Student Engagement
